

The City of Peterborough Waste Water Treatment Plant is a secondary treatment facility with chemical phosphorus removal and ultra violet disinfection. The Plant has a design capacity of 68,200 cubic metres. The Peterborough Wastewater Treatment Plant has undergone numerous upgrades and expansions since it was originally built on this site in 1925.

What: Wastewater Treatment Plant tour

When: Thursday, November 2 and November 9, at 10:00am, 2 sessions to choose from, limited to 20 guests, we will try to keep it no longer than 2 hours long with Q&A included.

Where: The Plant address is 425 Kennedy Road, Peterborough

How: Wear closed toe shoes. Most of the process is outdoors so please dress appropriately for the weather.

We have booked the Maintenance Building Training Room for this so it will serve as our starting/meeting point. Attached is a picture of the plant from the gate showing the Admin Bldg (17) and the Maint. Bldg (19). Parking can be found around both of these buildings and the Maintenance Building Training Room is located upstairs in the Maintenance Building. There is an elevator in the Maintenance Building located just through the door at the bottom of the stairs.
